Fig. 3. The classification of the lymph node stations of the stomach and the perigastric region according to the JGCA [58].

Localized Gastric or Gastroesophageal Cancer – Chemoradiation Is a Pertinent Component of Adjuvant Treatment for Patients at High Risk of Relapse

Leonard L. Gunderson, Matthew D. Callister, Dawn E. Jaroszewski, Helen J. Ross, Mitesh J. Borad, Richard J. Gray, Louis A. Lanza, Kristi L. Harold, Barbara A. Pockaj, Victor F. Trastek

Gastrointest Cancer Res 3(suppl 1):S26–S32. ©2009

Table 2. Local-regional relapse after node dissection of gastric cancer, University of Minnesota Reoperation Series.^{4,5}

Node Dissection*	No. pts at risk	Relapse in LN or LN Dissected Area	
		Only LF-RF No. (%)	Component† No. (%)
Method 1	25	2 (8)	11 (44)
Method 2	29	3 (10)	20 (69)
Method 3	26	3 (12)	13 (50)
Unknown	2	0	1
Totals	82	8 (10)	45 (55)

D2-D3

Abbreviations: LF-RF = local-regional failure/relapse; LN = lymph node.

*Method 1 – Subtotal or total gastrectomy, greater omentectomy, regional node dissection; Method 2 – Method 1 + splenectomy, total omentectomy, added node dissection—splenic, suprapancreatic, central celiac axis; Method 3 – Methods 1 and 2 plus extension of node dissection to porta hepatis and pancreatico-duodenal—equivalent to D2 or D3 node dissection.

† LR-RF as a component of failure.

Radiation Treatment Parameters in the Adjuvant Postoperative Therapy of Gastric Cancer

Joel E. Tepper and Leonard L. Gunderson

Table 6. Impact of Site of Primary Gastric Lesion and TN Stage on Irradiation Treatment Volumes—Antrum/Pylorus/Distal One Third of Stomach (General Guidelines)

<i>Site of Primary and TN Stage</i>	<i>Remaining Stomach</i>	<i>Tumor Bed Volumes**</i>	<i>Nodal Volumes</i>	<i>Tolerance Organ Structures</i>
4) Pylorus/distal 1/3 stomach T2N0 with invasion of subserosa	Yes, but spare 2/3 of one kidney (usually L) Variable dependent on surgical-pathologic findings*	T-stage dependent Head of pancreas, (+/- body), 1st and 2nd duodenum	N-stage dependent None or perigastric; optional: pancreatico-duodenal, porta hepatis, celiac, supra-pancreatic***	Kidneys, liver, spinal cord
T3N0	Variable dependent on surgical-pathologic findings*	Head of pancreas, (+/- body), 1st and 2nd duodenum	None or perigastric; optional: pancreatico-duodenal, porta hepatis, celiac, supra-pancreatic***	
T4N0	Preferable but dependent on surgical-pathologic findings*	As for T3N0 plus site(s) of adherence with 3-5 cm margin	Nodes related to site(s) of adherence +/- perigastric, pancreatico-duodenal, portahepatis, celiac, supra-panc	
T1-2N+	Preferable	Not indicated for T1	Perigastric, pancreatico-duodenal, portahepatis, celiac, supra-pancreatic; Optional splenic hilum***	
T3-4N+	Preferable	As for T3, T4N0	As for T1-2N+ and T4N0	

*For tumors with wide (>5 cm) surgical margins confirmed pathologically, treatment of residual stomach is optional if this would result in substantial increase in normal tissue morbidity.

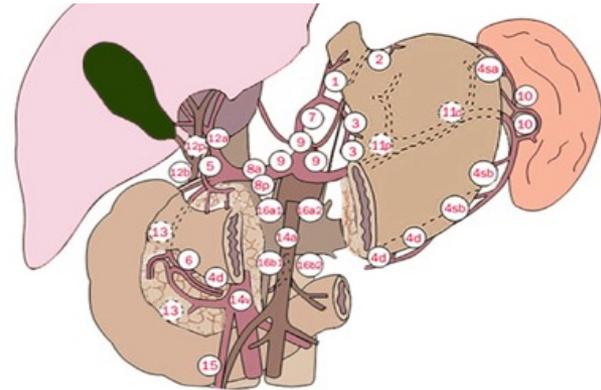

**Use preop imaging (CT, barium swallow), surgical clips, and postop imaging (CT, barium swallow).

***Optional node inclusion for T2-3N0 lesions if there has been an adequate surgical node dissection (D2 dissection) and at least 10-15 nodes have been examined pathologically.

Postoperative Anatomic and Pathologic Findings at CT Following Gastrectomy¹

Kyoung Won Kim

2002

LEARNING OBJECTIVES

After reading this article and taking the test, the reader will be able to:

- Discuss optimal CT technique for evaluation of patients who have undergone gastrectomy.
- Describe the CT appearance of postoperative changes following gastrectomy.
- Discuss the various patterns of postoperative complications and tumor recurrence in affected patients.

Postoperative Anatomic and Pathologic Findings at CT Following Gastrectomy¹

Cross-sectional Nodal Atlas: A Tool for the Definition of Clinical Target Volumes in Three-dimensional Radiation Therapy Planning¹

Index terms:
Computed tomography (CT), three-dimensional, 99.12917, 99.92
Lymphatic system, 99.12917, 99.92
Special reports
Treatment planning, 99.92
Radiology 1999; 211:815-828

Abbreviations:
CTV = clinical target volume
GTV = gross tumor volume
3D = three-dimensional

Virtual three-dimensional clinical target volume definition requires the identification of areas suspected of containing microscopic disease (frequently related to nodal stations) on a set of computed tomographic (CT) images, rather than the traditional approach based on anatomic landmarks. This atlas displays the clinically relevant nodal stations and their correlation with normal lymphatic pathways on a set of CT images.
