Center, Department of Radiation Oncology (MAASTRO clinic), GROW School for Oncology and Developmental Biology, Maastricht,
The Netherlands

CONCLUSIONS: *RE-RT is associated with poor S rates of 13-20% in pts with inoperable disease. However for this subgroup, no other curative options are available. For pts who receive re-RT as an adjunct to surgical resection S was 40%. Serious toxicity 45% at 5 y*

1998-2008 103 pts (70% CTRT)

Prognostic Factors for Survival After Salvage Reirradiation of Head and Neck Cancer

Tawee Tanvetyanon, Tapan Padhya, Judith McCaffrey, Weiwei Zhu, David Boulware, Ronald DeConti, and Andrea Trotti

«*Because of toxicities there is a strong rationale to refine pts selection to undergo reirradiation....»*

POTENTIAL PROGNOSTIC FACTORS

Co-morbidity (Charlson index and Adult Comorbidity Evaluation-27)

Pre-existing organ dysfunction (feeding tube dependency, tracheostomy, soft tissue defect)

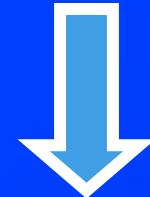

MEDIAN OS WAS 5.5 MONTHS IF BOTH PRESENTED VS 59 MONTHS WITH NEITHER ORGAN DYSFUNCTION NOR CO-MORBIDITY

OTHER INDEPENDENT PROGNOSTIC FACTORS: INTERVAL FROM PREVIOUS RT, RECURRENT T STAGE, TUMOR BULK AT REIRRADIATION; REIRRADIATION DOSE

RESECTABLE DISEASE RECURRENCE

post-operative reirradiation

Surgical resection standard of care

Long term disease control in 25 to 45%

RISK FACTORS:

Gross residual disease

Positive margins

Extracapsular exstension

Perineural and/or vascular invasion

(Bachar 2010, Parsons 1995)

TREATMENT OF HEAD AND NECK CANCER

Re-irradiazioni nel distretto cervico-facciale

Raccomandazioni di tecnica (BOZZA) AIRO 2011

Alterio Daniela

Istituto Europeo di Oncologia, Milano

Associazione
Italiana
Radioterapia
Oncologica

Introduzione	Pag. 2
-Reirradiazione del Rinofaringe	Pag. 3
-Reirradiazione non Rinofaringe	
Generalità tecniche	Pag. 4
Tecnica radioterapica	Pag. 5
Radioterapia postoperatoria	Pag. 7
Associazione a chemioterapia	Pag. 8
Effetti collaterali	Pag. 9
Fattori prognostici	Pag. 10
Controindicazioni	Pag. 11

CONCLUSIONS

Int. J. Radiation Oncology Biol. Phys., Vol. 81, No. 5, pp. 1211–1219, 2011

CRITICAL REVIEW

PRACTICAL CONSIDERATIONS IN THE RE-IRRADIATION OF RECURRENT AND SECOND PRIMARY HEAD-AND-NECK CANCER: WHO, WHY, HOW, AND HOW MUCH?

ALLEN M. CHEN, M.D., * THEODORE L. PHILLIPS, M.D., * AND NANCY Y. LEE, M.D. †

*Department of Radiation Oncology, University of California, Davis Cancer Center, Sacramento, CA; and †Department of Radiation Oncology, Memorial Sloan-Kettering Cancer Center, New York, NY

Table 5. Suggested Factors to be considered with respect to risk of toxicity for re-irradiation to head and neck

Variable	Lower risk	Intermediate risk	Higher risk
Interval from previous RT	>3 y	1 y to 3 y	<1 y
KPS	90–100	70–80	<70
Tumor volume	<30 cm ³	30–60 cm ³	>60 cm ³
GT dependence	No	Somewhat	Entirely
Previous RT dose (Gy)	<50	50–60	>60

-Reirradiazione oggi + fattibile rispetto al passato!
-Miglioramento tecnologico!
-Approccio multidisciplinare!
-Selezione dei pz!
