

Radioterapia
stereotassica
ablativa nel tumore
polmonare non a
piccole cellule in
stadio I: studio
retrospettivo
osservazionale.

Stereotactic Body Radiation Therapy for Inoperable Early Stage

Lung Cancer

VOLUME 27 • NUMBER 20 • JULY 10 2009

JOURNAL OF CLINICAL ONCOLOGY

ORIGINAL REPORT

Robert Timmerman,
M.D., William Straub
M.D., Gregory Videtic
M.D., and Hak Choy,

Outcome in a Prospective Phase II Trial of Medically Inoperable Stage I Non-Small-Cell Lung Cancer Patients Treated With Stereotactic Body Radiotherapy

Pia Baumann, Jan Nyman, Morten Hoyer, Berit Weinberg, Giovanna Gagliardi, Ingmar Lax, Ninni Drugge,
Lars Ekberg, Signe Friesland, Karl-Axel Johansson, Jo-Åsmund Lund, Elisabeth Morhed, Kristina Nilsson,
Nina Levin, Merete Paludan, Christer Sederholm, Anders Traberg, Lena Wittgren, and Rolf Lewensohn

SCopo: Valutare Efficacia (LC; OS; CSS) e Tossicità (RTOG) in
110 pazienti trattati con IG-SABR dal 2003 al 2012

Materiali e Metodi

SESSO	UOMINI	80 (72.7 %)

Risultati

TOSSICITA' ACUTA POLMONARE
G0 98.2%
G1 1.8%

- Il nostro studio conferma l' efficacia e la fattibilità della SABR in pazienti affetti da NSCLC in stadio I non candidati a chirurgia.
- Differenza significativa nel controllo locale di malattia tra pazienti in stadio IA e IB.
