Oesophageal carcinoma

*Complementary role of
multimodality imaging in
the management of
patients*

*Central role of radiology in
the era of «Clinical decision
making»*

*Structured report for staging and
restaging oesophageal cancer*

Invasive Oesophageal carcinoma

Outcome predictors and Aims of Staging

- *Parietal Invasion (T stage)*
- *Lymphatic Invasion (N stage)*
 - *Regional vs Distant lymph nodes*
- *Metastatic Disease (M stage)*
- *Vascular Invasion*
- *Operative margin involvement (CRM)*

Surgery

Neoadjuvant therapies

Palliative treatment

Endoscopic therapies

Oesophageal carcinoma

*Optimising pre-treatment staging
allows correct patient management
algorithm*

Oesophageal carcinoma

Multiple imaging modalities

MDCT

Primary staging investigation

✓ *First musketeer*

Oesophageal carcinoma

MDCT

- *Key objectives*
- ✓ *Define tumour position/extent/length*
 - **Circumferential Resection Margin**
- ✓ *Identify local invasion /lymph node enlargement*
- ✓ *Identify metastatic spread*
- ✓ *Determine the degree of oesophageal obstruction and associated complications*
- ✓ *Evaluate treatment response «Downstaging»*

Oesophageal carcinoma

MDCT Structured Report

➤ Primary tumour

- *Annular/Semi-annular/Polypoidal/Ulcerating*
- *Total cranio-caudal length tumour () mm*
- *Tumour position: Upper/Mid/Lower S1/S2/S3 Junctional T*
- *Maximal tumour thickness () mm*
- *Extramural spread Yes/No Depth () mm*
- *Nearest CRM is.....*

Oesophageal carcinoma

MDCT Structured Report

➤ Involved regional lymph nodes

- *Peri-oesophageal* *Yes/No* *Number ()*
- *Mediastinal* *Yes/No* *Number ()*
- *Left gastric* *Yes/No* *Number ()*
- *Celiac axis* *Yes/No* *Number ()*

➤ Involved non regional lymph nodes *Yes/No* *Location*

(outside surgical field from cervical perioesophageal to celiac nodes)

Oesophageal carcinoma

MDCT Structured Report

- *Peritoneal involvement* Yes/No
- *Liver Metastases* Yes/No
- *Pulmonary Metastases* Yes/No

Oesophageal carcinoma

MDCT Structured Report

Conclusion

➤ *Potential CRM*

Safe/at risk

Oesophageal carcinoma

Tumor location

1) Cervical

2) Thoracic

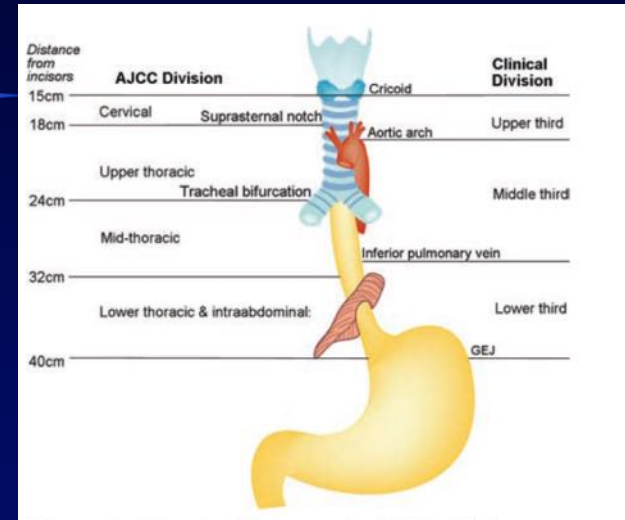

- Upper

- Middle

- Lower

3) Abdominal

- Involving GOJ: Junctional tumours

Location is defined by upper extent tumour

Oesophageal carcinoma

Tumor location

Location of primary tumour does not necessarily affect prognosis

BUT

Determines subsequent treatment regime

Junctional tumours

↪ Laparoscopy for staging

Oesophageal carcinoma

Multiple imaging modalities

PET/CT

✓ *Second musketeer*

Detects unexepected metastases in 5-28% of patients (bone metastases, lymph nodes etc)

Oesophageal carcinoma

Multiple imaging modalities

EUS

✓ *Third musketeer*

Guidelines suggest mandatory for local staging in the non metastatic patients

Problem solving tool

resectable tumour: what about lymph nodes detected by CT?

Junctional tumours: extension to crura

Oesophageal carcinoma

MULTIMODALITY IMAGING ALGORITHM

➤ MDCT

- *First line staging modality*
- *Advanced loco-regional disease and/or metastatic disease*
 - *No further investigations*
- *Assessment disease response neo-adjuvant treatment*

Oesophageal carcinoma

MULTIMODALITY IMAGING ALGORITHM

➤ EUS

- *Local staging*
- *Pragmatic problem solving: T1a vs T1b/T3 vs T4a/b*

Oesophageal carcinoma

MULTIMODALITY IMAGING ALGORITHM

➤ PET/CT

- *Initial staging in potentially resectable patients*
- *Assessment of treatment response*
- *Detection of recurrent disease*

Oesophageal carcinoma

Multidisciplinary team

management is critical to

optimal patient outcome

tumours*

MR

*Highest
potential
where*

*(83%) for T staging →
organ-confined tumours
studies were not satisfactory*

Oesophageal carcinoma

➤ *Pre-Operative staging*
18 pts

N staging

MR and EUS

Higher sensitivity than MDCT but none of the three techniques had satisfactory results in terms of specificity and accuracy

Oesophageal carcinoma

➤ Pre-Operative staging

18 pts

CONCLUSION:

In this pilot study, we have shown that MR with DWI could enrich the current pre-operative work-up for oesophageal cancer and could be used for T and N staging. However, larger studies will need to be carried out before introducing this technique in the standard diagnostic pathway, in order to understand if MR with DWI could change its management and replace more costly or invasive tests such as PET-CT or EUS

Oesophageal carcinoma

➤ Pre-treatment staging

Esophageal Carcinoma: Ex Vivo Evaluation with Diffusion-Tensor MR Imaging and Tractography at 7 T¹

Purpose:

To determine the feasibility of diffusion-tensor magnetic resonance (MR) imaging and tractography as a means of evaluating the depth of mural invasion by esophageal carcinomas.

Results:

In all 20 carcinomas (100%), the diffusion-weighted images, apparent diffusion coefficient (ADC) maps, fractional anisotropy (FA) maps, λ_1 maps, and direction-encoded color FA maps made it possible to determine the depth of tumor invasion of the esophageal wall that was observed during histopathologic examination. The λ_1 maps showed the best contrast between the carcinomas and the layers of the esophageal wall. The carcinomas had both lower ADC values and lower FA values than the normal esophageal wall; thus, the carcinomas were clearly demarcated from the normal esophageal wall. Diffusion-tensor tractography images were also useful for determining the depth of tumor invasion of the esophageal wall.

Conclusion:

Diffusion-tensor MR imaging and tractography are feasible in esophageal specimens and provide excellent morphologic data for the evaluation of mural invasion by esophageal carcinomas.

MRI in esophageal cancer

Diffusion-weighted magnetic resonance imaging for the prediction of pathologic response to neoadjuvant chemoradiotherapy in esophageal cancer[☆]

Peter S.N. van Rossum^{a,b}, Astrid L.H.M.W. van Lier^a, Marco van Vulpen^a, Onne Reerink^a, Jan J.W. Lagendijk^a, Steven H. Lin^c, Richard van Hillegersberg^b, Jelle P. Ruurda^b, Gert J. Meijer^{a,*,1}, Irene M. Lips^{a,1}

Oesophageal carcinoma

➤ Post treatment restaging

Before nCRT

During nCRT

After nCRT

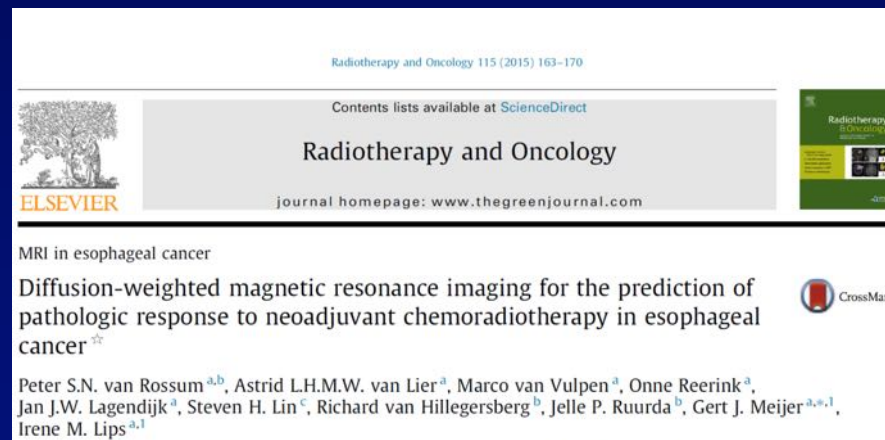

$\Delta ADC = 48\%$

$\Delta ADC = 44\%$

Oesophageal carcinoma

➤ Post treatment restaging

- ✓ *Pathological CR or good response status could be predicted by the change in tumour ADC early during neoadjuvant treatment (as in rectal, brain cancer etc)*
- ✓ *Early ADC changes (two to three w) during nCRT are more predictive of pathCR than late ADC changes after completion of nCRT*

Oesophageal carcinoma

➤ Post treatment restaging DWI

- ✓ *No significant association between initial ADC and response*
- ✓ *Significant association between higher initial ADC values in non responders → presence of necrotic areas which are less responsive to cytotoxic treatments*

De Cobelli F et Eur Radiol 2013

Oesophageal carcinoma

Eur Radiol. 2013 Sep;23(9):2492-502. doi: 10.1007/s00330-013-2844-8. Epub 2013 May 4.

Accuracy of multidetector-row CT for restaging after neoadjuvant treatment in patients with oesophageal cancer.

Konieczny A¹, Meyer P, Schnider A, Komminoth P, Schmid M, Lombriser N, Weishaupt D.

Exclude disease progression

CONCLUSION:

Although **MDCT** tends to be able to exclude advanced tumour stages (T3, T4) with a higher likelihood, the diagnostic accuracy of high resolution MDCT for restaging oesophageal cancer and assessing the response to neoadjuvant therapy has not improved in comparison to older-generation CT. Therefore, the future assessment of oesophageal tumour response should focus on combined morphologic and metabolic imaging.
